## Meiji Stereo Microscopes at MilesCo Scientific

### Meiji SKT Series Stereo Microscopes

**Crafted in Japan**

**All Metal Construction**

**Affordable Dependable Quality**

The SKT Series Stereo Microscopes have crisp, erect images over a wide field of view.

With a wide range of models featuring incident illumination, transmitted illumination or both, these study microscopes are built to last, year after year. Just perfect for grade schools, high schools and junior colleges!

The SKT series is great for observing any biological or physical science specimens, coins, etc., virtually any object because the pole stand allows the optics to be raised high enough to fit virtually any specimen.
